

PMP and PMF Course Outcomes

At course completion, participants will be trained to:

- understand and more effectively link project work with business value-add
- understand differences between a project vs operations vs strategy
- understand how a project fits into the “real work world” and how to manage priorities, accountabilities, risk, change & stress
- initiate a project in a formalized, structured format following globally accepted best practices
- initiate, plan, execute, monitor, control and close a project (process groups and lifecycle of a project)
- analyze, plan, monitor and control project knowledge areas
- understand project scope, schedule, costs, communications and risk
- understand project procurement and stakeholder management
- manage client relationships and deal with individuals at all levels
- clarify priorities and manage influencers (risks, assumptions, constraints, dependencies) and trade-off decisions
- deliver solutions that are better aligned with the business and maximize value
- understand what is PMI, it’s certifications and benefits of membership
- be more prepared to understand and challenge the PMI certification exams
- be prepared to pursue CCA Gold Seal Certifications
- be prepared to address continuing education requirements for professional associations and certification requirements
- be prepared to use templates within your business (see how they are completed and use the templates within your business)

Note: depth of understanding will differ based on the level of course completed (PMP vs. PMF) and the level of effort students complete Online and also through webcasts

The courses are primarily based on the most globally accepted Project Management methodology created by the Project Management Institute (PMI at www.pmi.org). The courses also include aspects of other methodologies that are globally followed and accepted, including: PMI, ISO 9000, Six Sigma, TQM, Journeyman Carpentry, FITT Marketing and Sales, Global Organizational Design.
